

DirtGlue Eliminates Erosion in Hydroseeding Applications

Using **DirtGlue Polymer Emulsion** instead of your regular tackifier is a much more **effective** and **cost competitive** solution to prevent run-offs and accelerate germination. The **unique bonding capabilities** of our polymer technology keep soil, seeds, nutrients, and cellulose mix in place ring heavy rains and extreme run-off situations. With **DirtGlue Polymer Emulsion**, costly and time-consuming re-spraying and touch-ups are being eliminated and with every application you gain a **happy and satisfied customer**. **DirtGlue Polymer Emulsion** combined with your hydroseeding mix holds water in the soil longer (greenhouse effect) and protects the soil and plants from rapid dehydration. Benefits proven through extensive testing include:

- **2-5 days earlier germination**
- **More than a 20% higher germination rate of grasses**
- **Reduction in soil losses due to strong precipitation (sediment control)**
Prevention of loss of fines due to wind erosion (dust control)

By just adding one cent per square foot, you are able to guarantee the job and have peace of mind for you and your customers. Start now and add to your application technology what many in your industry are already doing.
